**Wynn Kapit : Geography Coloring Book (3rd Edition)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Geography Coloring Book (3rd Edition):

45 of 46 people found the following review helpful. Excellent Book! By Cathy My oldest son used this book in his 9th grade honors history class. At the time I thought that was odd, to have an honors student coloring. However, with all the budget cuts with schools, they have dropped History for 9th graders, which means no more Geography in high school. I have 2 daughters that are home schooled in 8th grade and I ordered this book so they could learn where the countries are. My son, that used this book, really knows his Geography well. I have just started with my girls on this book and it's awesome. They are learning countries they have never heard of, along with knowing where the countries are that they have heard of. It's very helpful to color the names of the country, then outline it, color it in, and read about it. I highly recommend this book. I am really enjoying learning the countries as well. There are plenty of places that I have heard of but can't quite place where they are exactly and this book is a fun way to figure that out. 1 of 1

people found the following review helpful. You can't go wrong with this Geography Book! By IndyIN This book is fabulous and finally challenging my child! The coloring is great but there's so much extra information in the book. I can actually see reusing it again in a year or two as a refresher. We had gone over map skills so many times but this is such a different approach. The pages copy fairly well. She is elementary age and so I do end up assisting her more than other books, but she was flying through even middle school level books before. This is definitely slowing her down and challenging her, but even as an adult I am learning new things. I might start having to copy some pages for me too! I did NOT receive this product at discount. 1 of 1 people found the following review helpful. Map Out Your Colored Pencil Set By thirdtwin If you don't know where you are in life this geography coloring book might help you figure it out- the pictures aren't as intricate as some other books, but if you're interested in the topic as I am- go ahead. You can learn and exercise your fingers at the same time.

This unique educational tool introduces learners to the countries of the world and the states of the United States. Through active participation, coloring the maps, users gain a broad understanding of the material—and retain that understanding. Each section begins with a plate containing a political map, a physical map, and regional maps. World Thematic Maps consist of eleven global maps covering climate, rainfall, temperatures, prevailing winds, ocean currents, vegetation, land use, population, racial distribution, languages, and religions—presenting a «global» view of human activity. Flags and Review of Nations groups flags of the world according to continents, with the illustration of the flag placed close to the country of origin. For children of all ages—and their parents—who could benefit from a colorful “crash course” —or “refresher” —in geography, and an enjoyable and informative guide to a greater understanding of the world around them.

From the Author AUTHOR'S NOTE: Previous problems with paper quality have been corrected for this new (3rd) edition. For this book I have hand-drawn and lettered all the maps and names of countries, etc., using the same highly effective coloring format that I created for the highly innovative Anatomy Coloring Book which has sold well over three million copies in this country alone. New features in this edition include the use of extremely bold headings to facilitate content recognition and introductory pages previewing each section. Accompanying the maps of of states, countries, continents, regions, empires, flags, mountain ranges, rivers, etc. are brief, but informative and often fascinating descriptions enhancing the "learn while you color" process. You can color eight early empires (including the two Islamic) superimposed over modern maps, clearly showing which countries continue to bear their historic influences. Color thematic maps of the world; each dealing with weather, vegetation, ocean currents, prevailing winds, populations, racial distribution, religions and languages. Similarities among the flags of the world can be observed by coloring them grouped according to the geographic proximity of their countries of origin. An extensive geographical dictionary, defining and identifying the location of each entry, is provided which also can serve as a dual-function quiz. From the Back Cover Wynn Kapit, the designer of the extremely popular Anatomy Coloring Book, has adapted that same coloring format to the subject of geography. This method of learning has proven to be unsurpassed in developing awareness, achieving retention, and experiencing enjoyment. This edition contains: Political maps describing the United States and all the nations of the world according to their regional grouping within a, particular continent. Pertinent data about each state or country, plus fascinating facts of historic, geographic, political, or economic nature. These facts are often related to today's headlines. Physical maps of each continent, illustrating the major rivers, mountain ranges, mountain peaks, and specific land regions. Visual comparisons of size among the countries themselves, as well as to the various states of the United States. Maps, covering larger areas, provide the reader with a bigger picture regarding the location of the country or region under consideration. Maps describing the, transformation of the former Soviet Union into fifteen separate nations, and the former Yugoslavia into five new nations. Thematic maps of the world describing weather, vegetation, ocean currents, prevailing winds, population, racial distribution, religions, and languages. Flags of the world are shown organized according to the geographic locations of their countries of origin. Past and future movement of continents over millions of years, plus the location of earthquake and volcano zones. Eight historic land empires (see below) superimposed on modern maps with extensive descriptions tracing the rise and fall of each empire. An index that serves as a dictionary, identifying and locating each entry. This feature can also be turned into a fascinating, dual-function quiz. Excerpt. © Reprinted by permission. All rights reserved. The third edition organizes the coloring book in a more user-friendly way. Each section is introduced by a non-colorable page on which the various plates (map and text pages) of the section are outlined. This provides an overview of what lies ahead, and in the process makes the individual plates more meaningful. The use of a very bold, non-colorable type face for various headings make identification of subject matter much easier—the balloon lettering of names and places, that is an essential part of the coloring system, is now used strictly for coloring purposes. A dramatic new plate (67) has been added to the size comparisons section in which 20 of the most populated nations are listed. The previous plate just dealt with size based on area comparisons. Population figures are estimates through 2003, based on current rates of growth. At best, these are rough estimates; accurate figures, particularly in less-developed nations are unavailable, and birth rates are beginning to drop in almost all

nations. There is still considerable population growth in the non-industrialized world, but increasingly at unexpectedly lower levels. Space accorded to world thematic plates has been doubled to allow the reader to concentrate on a single theme for each plate. Although these plates appear in the rear of the book, they are important enough for you to consider reading them first, even if you don't wish to color them at the outset. Much of the terminology used throughout the book regarding weather, climate, wind patterns, ocean currents, varieties of vegetation, land use, population, race, languages, and religions, is given special attention in these thematic plates. Familiarization with their meaning can only enhance the use of the book. The eight historic land empires—particularly the Islamic and Ottoman empires—take on additional importance in the age of international terrorism, which is currently a threat from militant groups within Islamic nations. The tenets of the Islamic religion are described in the text accompanying the maps. The use of modern maps in conjunction with empire boundaries helps the reader understand current cultural distinctions and conflicts. The index / dictionary /quiz at the end of the book has been opened up with additional space inserted between each entry. This improvement makes the use of material that much easier when using the dictionary entries as the basis of a two-way quiz: trying to identify names associated with the definitions, or trying to define the entry names.
